

MOBILEFRAME[®]

Configurable Mobile Applications[™]

Custom Mobile Applications...

No Custom Programming

MobileFrame's Platform Provides a Complete Mobility Solution

MobileFrame's 100% code-free mobility platform eliminates custom programming through an intuitive point & click desktop, enabling novice users to easily create, deploy and administer sophisticated custom mobile applications. Our **Smart Architecture™** ensures mobile workers always have complete workflow available regardless of network availability. MobileFrame provides everything your business needs to ensure your projects run smoothly and drive high returns on investment. Our robust administration tools include remote software updates, instant messaging, auto-device driver recognition, GPS mapping & tracking, prioritized synchronization, remote device control, configuration & management and much more. And our Integration Wizard makes integrating to backend systems a breeze.

Intuitive. A graphical user interface enables novice users to create workflow using point & click features. All programming complexities are handled in the background so they are transparent to business users.

Reliable. Mobile applications operate with or without network connectivity via Smart Client and Intelligent Networking technology.

Versatile. Mobile workers can capture rich data types such as photos, signatures, sketches, barcode scans, fingerprints, RFID etc and the results are returned to the back office in electronic format.

Integrated. Secure, real-time bi-directional access to existing CRM, SCM, ERP, accounting, scheduling, and other back office systems.

Scalable. Leverages industry standard servers and networks for maximum flexibility to update applications as needs evolve.

Remote Device Control, Configuration and Management...

With MobileFrame's Remote Device Control capability, not only can you see exactly what the mobile worker sees on their mobile device, you can actually take control of the device as if it were in your own hands. Now you can troubleshoot any device without having to recall it from the field; with MobileFrame, it's all built-into one fully integrated platform.

Our remote device monitoring capabilities allow you to:

- Take remote control of devices in the field
- Monitor recent activities on each mobile device including running processes
- Geo-fence your workers and receive alerts if they are outside territories
- Monitor battery charge level & receive alerts when it's low
- Automatically compact the database when free memory is low
- Remotely update software, including 3rd party software

GPS Mapping and Tracking, Points of Interest & More...

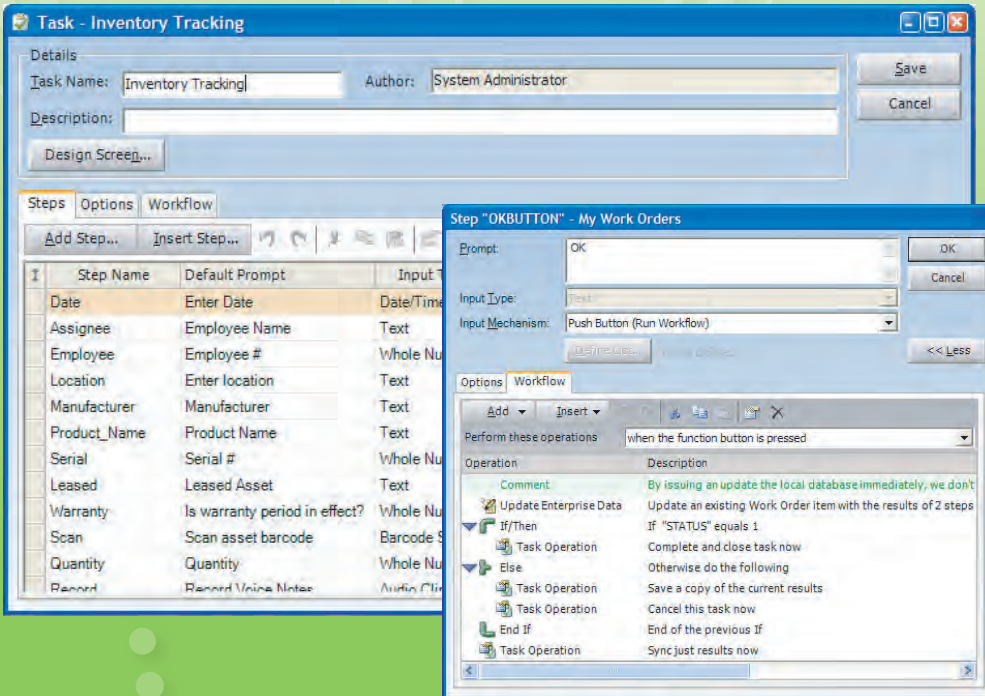

GPS tracking is fully integrated with MobileFrame's Configurable Mobile Application™ Platform, allowing businesses with mobile workforces to recover time and money lost due to operational inefficiencies. Some features include:

- Worker Status & Location Tracking
- Customizable displays for each worker
- Geofencing, speeding and arrival alerts
- Integrated location-based dispatching
- Setup custom fixed markers (points of interest) such as customers, warehouses, etc
- Road, Satellite, Terrain & Hybrid maps
- User friendly map panning & zooming
- Automated address lookups
- Locate nearest vehicles
- and more...

Features

- Smart client operates online or offline
- Windows administrator desktop
- Schedule and manage projects
- Design tasks and workflow
- Manage access to Enterprise Data
- Report time and expenses
- Business rules definition and runtime engines
- Enforce Workflow
- Capture Photographs
- Scan Bar Codes
- Draw Sketches
- Speech Recognition (Tablet PC Only)
- Messaging and alerts
- Enterprise system connectors
- On-demand wireless LAN/WAN
- End-to-end data and system security

Key Benefits

User Configurable: Business administrators who manage mobile activities can easily create, update, and deploy assignments, workflow, and enterprise data to mobile workers, using an intuitive GUI based application.

Always Available: With local storage of data and business rules, the MobileFrame Client™ can operate with or without a persistent network connection, enabling workers to be continuously productive.

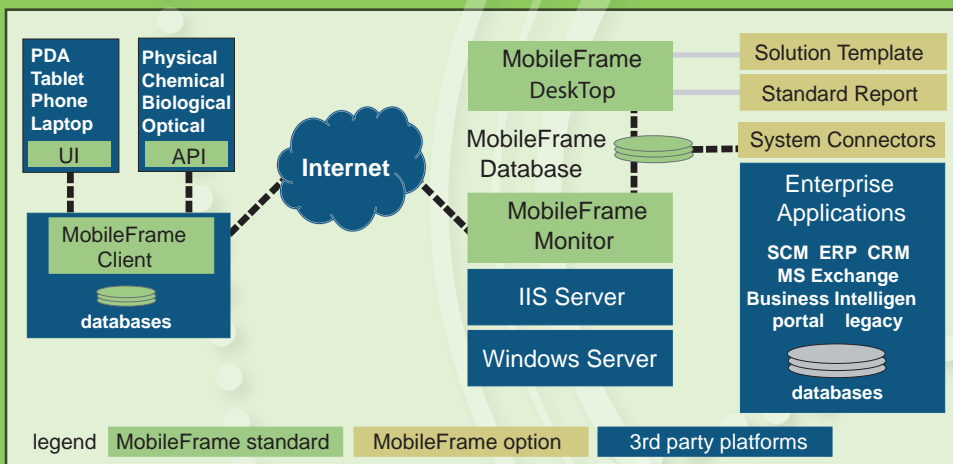

Network Efficient: Upon discovery of wireless or wireline access, the system automatically sends and receives queued transactions, content, and messages via a secure connection, optimizing user productivity while minimizing transmission costs.

Enterprise Integration: Optional connectors enable secure and controlled bi-directional data exchange with backend CRM, ERP, SCM, finance, scheduling, Exchange, and legacy business systems.

Industry Standards: Designed to comply with key standards, leveraging existing and planned investments and enabling a growth path to future functionality. MobileFrame Server components based on Microsoft Windows Server 2000/2003/2008, SQL Server, Oracle, and MobileFrame Client based on Microsoft CE .NET and SQL CE.

Components

- MobileFrame Desktop™ Windows-based business and system administrator application
- MobileFrame Client™ Microsoft Windows Mobile based field worker application
- MobileFrame Monitor™ Windows-based synchronization web service
- MobileFrame SQL Mobility Database

System Requirements

Server Platform

Microsoft Windows Server 2000/2003/2008, SQL Server 2000 or later. (IIS Required)

Handheld Clients

Any Microsoft .NET compatible device including PDAs, Tablets, and Notebooks

Desktop Clients

Windows 2000 Pro, XP, or Vista Ultimate.

Networking

Wireless 802.3 or 802.11; LAN; EVDO/CDMA, CDPD, GSM/GPRS, or iDEN WAN; or 56k modem.

Middleware Support

Optional integration with popular mobile, wireless, messaging, and enterprise application gateways.
